The Air Sea Rescue Manual

How to be a great online searcher, demonstrated with step-by-step searches for answers to a series of intriguing questions (for example, “Is that plant poisonous?”). We all know how to look up something online by typing words into a search engine. We do this so often that we have made the most famous search engine a verb: we Google it—“Japan population” or “Nobel Peace Prize” or “poison ivy” or whatever we want to know. But knowing how to Google something doesn't make us search experts; there's much more we can do to access the massive collective knowledge available online. In The Joy of Search, Daniel Russell shows us how to be great online researchers. We don't have to be computer geeks or a scholar searching out obscure facts; we just need to know some basic methods. Russell demonstrates these methods with step-by-step searches for answers to a series of intriguing questions—from “what is the wrong side of a towel?” to “what is the most likely way you will die?” Along the way, readers will discover essential tools for effective online searches—and learn some fascinating facts and interesting stories. Russell explains how to frame search queries so they will yield information and describes the best ways to use such resources as Google Earth, Google Scholar, Wikipedia, and Wikimedia. He shows when to put search terms in double quotes, how to use the operator (*), why metadata is important, and how to triangulate information from multiple sources. By the end of this engaging journey of discovering, readers will have the definitive answer to why the best online searches involve more than typing a few words into Google.

Social Semantics: The Search for Meaning on the Web provides a unique introduction to identity and reference theories of the World Wide Web, through the academic lens of philosophy of language and data-driven statistical models. The Semantic Web is a natural evolution of the Web, and this book covers the URL-based Web architecture and Semantic Web in detail. It has a robust empirical side which has an impact on industry. Social Semantics: The Search for Meaning on the Web discusses how the largest problem facing the Semantic Web is the problem of identity and reference, and how these are the results of a larger general theory of meaning. This book hypothesizes that statistical semantics can solve these problems, illustrated by case studies ranging from a pioneering study of tagging systems to using the Semantic Web to boost the results of commercial search engines. Social Semantics: The Search for Meaning on the Web targets practitioners working in the related fields of the semantic web, search engines, information retrieval, philosophers of language and more. Advanced-level students and researchers focusing on computer science will also find this book valuable as a secondary text or reference book.

Strictly Come Dancing Word Search Book

'An astonishingly rich story... wonderfully informative' The Times 'Rappaport does a terrific job of bringing respectful rigour to her account of Seacole's extraordinary life' Daily Mail In Search of Mary Seacole is a superb and revealing biography that explores her remarkable achievements and unique status as an icon of the 19th century, but also corrects some of the myths that have grown around her life and career. Having been raised in Jamaica and worked in Panama, Mary Seacole came to England in the 1850s and volunteered to help out during the Crimean War. When her services were turned down, she financed her own expedition to Balaclava, where she earned her reputation as a nurse and for her compassion. Popularly known as ‘Mother Seacole’, she was the most famous Black celebrity of her generation – an extraordinary achievement in Victorian Britain. She regularly mixed with illustrious royal and military patrons and they, along with grateful war veterans, helped her recover financially when she faced bankruptcy. However, after her death in 1881, she was largely forgotten for many years. More recently, her profile has been revived and her reputation lionised, with a statue of her standing outside St Thomas's Hospital in London and her portrait - rediscovered by the author - is now on display in the National Portrait Gallery. In Search of Mary Seacole is the fruit of almost twenty years of research by Helen Rappaport into her story. The book reveals the truth about Seacole's personal life and her 'rivalry' with Florence Nightingale, along with much more besides. Often the reality proves to be even more remarkable and dramatic than the legend.

Introducing Liberation Theology

This open access book covers all facets of entity-oriented search—where “search” can be interpreted in the broadest sense of information access—from a unified point of view, and provides a coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III

explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an understanding of basic probability and statistics concepts as well as a basic knowledge of machine learning concepts and supervised learning algorithms.

The field of global optimization has been developing at a rapid pace. There is a journal devoted to the topic, as well as many publications and notable books discussing various aspects of global optimization. This book is intended to complement these other publications with a focus on stochastic methods for global optimization. Stochastic methods, such as simulated annealing and genetic algo rithms, are gaining in popularity among practitioners and engineers be they are relatively easy to program on a computer and may be cause applied to a broad class of global optimization problems. However, the theoretical performance of these stochastic methods is not well under stood. In this book, an attempt is made to describe the theoretical prop erties of several stochastic adaptive search methods. Such a theoretical understanding may allow us to better predict algorithm performance and ultimately design new and improved algorithms. This book consolidates a collection of papers on the analysis and de velopment of stochastic adaptive search. The first chapter introduces random search algorithms. Chapters 2-5 describe the theoretical anal ysis of a progression of algorithms. A main result is that the expected number of iterations for pure adaptive search is linear in dimension for a class of Lipschitz global optimization problems. Chapter 6 discusses algorithms, based on the Hit-and-Run sampling method, that have been developed to approximate the ideal performance of pure random search. The final chapter discusses several applications in engineering that use stochastic adaptive search methods.

Brain Games - Large Print Word Search (Arrow)

One of the world’s leading scientists explains why—and how—the search for intelligent life beyond Earth should be expanded. Fifty years ago, a young astronomer named Frank Drake first pointed a radio telescope at nearby stars in the hope of picking up a signal from an alien civilization. Thus began one of the boldest scientific projects in history, the Search for Extraterrestrial Intelligence (SETI). After a half-century of scanning the skies, however, astronomers have little to report but an eerie silence—eerie because many scientists are convinced that the universe is teeming with life. Physicist and astrobiologist Paul Davies has been closely involved with SETI for three decades and chairs the SETI Post-Detection Taskgroup, charged with deciding what to do if we’re suddenly confronted with evidence of alien intelligence. He believes the search so far has fallen into an anthropocentric trap—assuming that an alien species will look, think, and behave much like us. In this provocative book Davies refocuses the search, challenging existing ideas of what form an alien intelligence might take, how it might try to communicate with us, and how we should respond if it does.

Stochastic Adaptive Search for Global Optimization

Seminar paper from the year 2013 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: B, The University of Chicago, language: English, abstract: The findings of the study are well consistent with close-cut studies of other companies offering hospitality services online. According to Harcar and Yucelt (2012), perceived convenience ranked highest in explaining the consumers’ search intention as a dependent variable and as if that is not enough, the same research findings did hold ground for another rather distanced online travel company as can be justified by the fact that perceived convenience by the consumer made the highest contribution in affecting consumers’ search intention while their were searching for their services (Peng et al, 2013). These findings were again consistent with of another scholar who in his studies, discovered that perceived convenience had much contribution to make on the customers’ search intention (Conyette, 2012). On the other hand, the attitude of the consumer as far as his/her search intention is concerned also gave relatively considerable contribution. The findings of the study place the attitude of the consumer as the second strongest factor likely to affect the search intention of consumers and according to another research, the attitude of the consumer played a great role in affecting the consumer in his/her search intention as far as online travel is concerned (Khandelwal et al, 2012). It is explained that the consumer’s attitude has a great effect on the consequential bearing of his search with regards to making reservations online of buying hospitality services online. This study finding is consistent with other studies and much more matches the expectations of stakeholders in this industry who without prior knowledge of customers’ preferences and intentions, can not really compete in the industry (Park et al). Knowing the attitude of the consumer and understanding that this attitude would affect his/her search intentions is key to making any online travel business successes (Jha, 2014). Intensive research placed subjective norm on the lower end of affecting consumers’ search intention when compared with perceived convenience and consumers’ attitude all through the study. [...]

The first edition of Search Methodologies: Introductory Tutorials in Optimization and Decision Support Techniques was originally put together to offer a basic introduction to the various search and optimization techniques that students might need to use during their research, and this new edition continues this tradition. Search Methodologies has been expanded and brought completely up to date, including new chapters covering scatter search, GRASP, and very large neighborhood search. The chapter authors are drawn from across Computer Science and Operations Research and include some of the world’s leading authorities in their field. The book provides useful guidelines for implementing the methods and frameworks described and offers valuable tutorials to students and researchers in the field. “As I embarked on the pleasant journey of reading through the chapters of this book, I became convinced that this is one of the best sources of introductory material on the search methodologies topic to be found. The book’s subtitle, “Introductory Tutorials in Optimization and Decision Support Techniques”, aptly describes its aim, and the editors and contributors to this volume have achieved this aim with remarkable success. The chapters in this book are exemplary in giving useful guidelines for implementing the methods and frameworks described.” Fred Glover, Leeds School of Business, University of Colorado Boulder, USA “[The book] aims to present a series of well written tutorials by the leading experts in their fields. Moreover, it does this by covering practically the whole possible range of topics in the discipline. It enables students and practitioners to study and appreciate the beauty and the power of some of the computational search techniques that are able to effectively navigate through search spaces that are sometimes inconceivably large. I am convinced that this second edition will build on the success of the first edition and that it will prove to be just as popular.” Jacek Blazewicz, Institute of Computing Science, Poznan University of Technology and Institute of Bioorganic Chemistry, Polish Academy of Sciences

The Eerie Silence

"David Yallop spent ten years on the trail of the mysterious Carlos the Jackal, a man accused of some of the most heinous acts in the annals of international terrorism: the attack on the Israeli athletes at the Munich Olympics, the kidnapping of the OPEC oil ministers, the massacre at Lod airport in Tel Aviv, and scores of bombings, murders, and hijackings. He found his man. But it was what he discovered along the way that shocks and surprises most." "Yallop's intrepid search led him into dangerous territory. He was in Beirut at a time when Westerners were being kidnapped and murdered in alarming numbers, and his guide was killed mysteriously. He continued his investigations in Tripoli, Tunis, Caracas, Tel Aviv, Damascus, Vienna, London, and Paris, moving through the murky worlds of terrorists and counterterrorists, intelligence and counterintelligence, spies and double agents. He drank orange juice with Colonel Qadaffi in his tent, talked until dawn with Yasser Arafat in a basement in Tunisia, and visited Carlos's old school chums in Venezuela and in quiet London neighborhoods. Tracking the Jackal is a real-life story about the world that Frederick Forsyth, John le Carre, and Tom Clancy turn into fiction - a world that runs on intrigue and deception, with governments and security forces operating outside their own laws when they see fit. Carlos himself turns out to be almost a mythical creation of that world, employed by various sinister forces for their own purposes. Tracking the Jackal reads like a thriller, but it is a major work of investigative reporting that reveals a complex web of political corruption and betrayal."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc.
